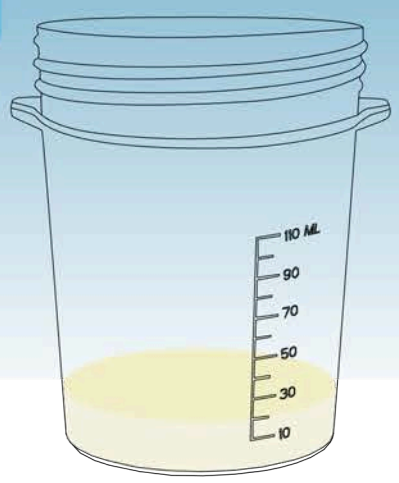
First Step™

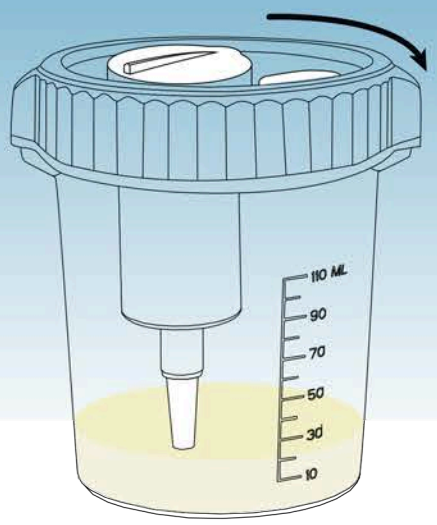
Multi-Drug Urine Screen Test
Procedure Card

1



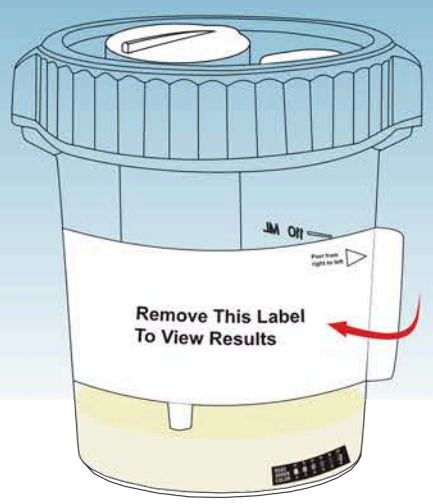
Donor provides urine specimen in cup.

2



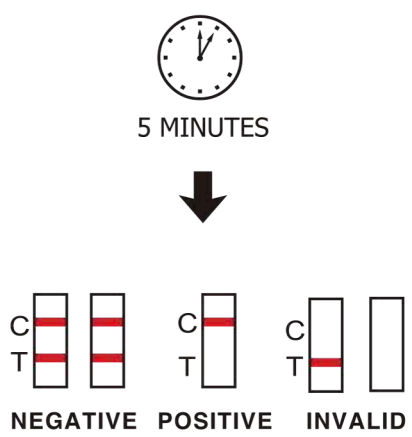
After collection, seal the cup with the Vacu Lid.

3



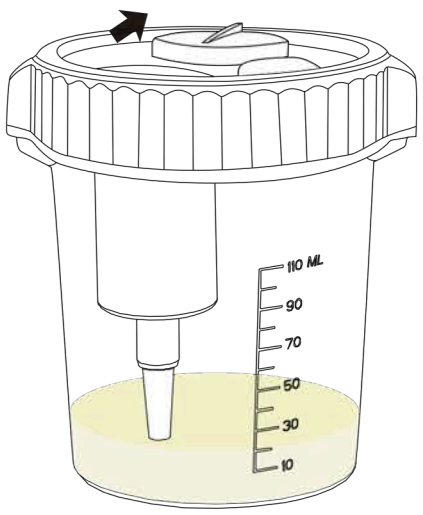
Remove peel-off label to view results at 5 minutes.

4



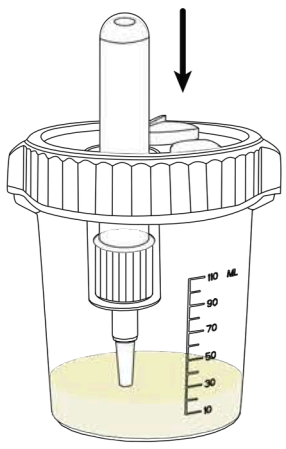
Refer to diagram above for result interpretation.

5



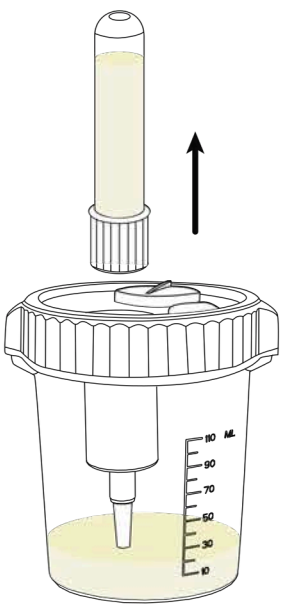
For urine transfer collection, slide the closure on the lid clockwise to reveal the vacutainer needle.
Caution: Needle! Avoid placing fingers into the lid cavity.

6



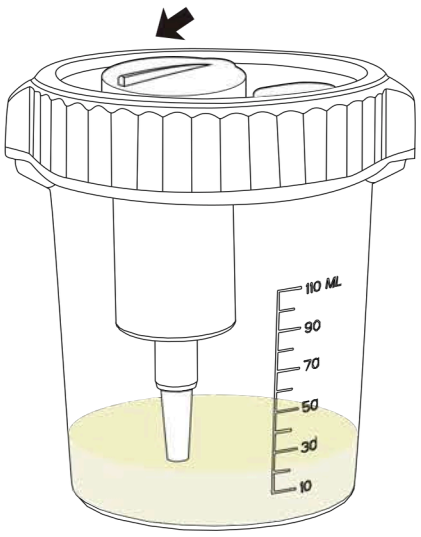
Push the vacuum tube into the cavity until the tube cap has been fully penetrated and hold in position.

7



The urine will be filled into the tube automatically. Remove the tube after collection.

8



Slide the closure back for safety.

9

You can also remove the rubber plug on the Vacu Lid and use a pipette to extract urine.
